THE POWER OF PARTNERSHIP:
U.S. Army Green Berets Attend Western
by Chuck Gross

Whether their knowledge has come from personal experience, or from watching a Hollywood movie or the History Channel, many people know at least a little bit about the U.S. Army Special Forces. Known commonly as “Green Berets,” these unique soldiers make up the most specialized combat forces in the Army. Their activities range from thwarting acts of terrorism to supporting humanitarian efforts. They engage in foreign internal defense, special reconnaissance, unconventional warfare, and a broad range of other types of military missions. However, what few people at Western Carolina realize is that, through a partnership with the US Army and the Servicemembers Opportunity College, Special Forces Medical Sergeants are now enrolled as students in Western’s Emergency Medical Care (EMC) Bachelor of Science online degree program.

Western’s online EMC degree program allows paramedics with roughly two years of college to complete a four-year bachelor of science degree. This program, the first of its kind in the country, has been in operation since 1977. In the fall of 2000, EMC faculty members began offering courses in an online format, primarily to paramedics in North Carolina who wished to complete a bachelors degree while continuing to work.

In 2006, knowing that Special Forces Medical Sergeants, who are also referred to by their occupational specialty code of 18 Delta, would make superb candidates for the online EMC program, leaders from the Educational Outreach Division and Department of Health Sciences began exploring the possibility of offering the EMC program to this elite group. After more than a year of coordination with officials from the Army Continuing Education System and the Servicemembers Opportunity College in Washington, D.C., and also from the Army’s JFK Special Warfare Center and School at Fort Bragg, Western’s

Partnership with Tri-County Community College Helps Students Reach Their Goals

By Debra Smith

Tri-County Community College is located in the westernmost tip of North Carolina on Highway 64 in Murphy, NC with the Graham County Center in Robbinsville, NC. The College serves commuter students in a remote, rural area consisting of Cherokee, Clay and Graham counties.

The Distance Education programs offered by Western Carolina University, Educational Outreach and Tri-County Community College have helped students successfully achieve their educational goals by working together to provide services and degree programs that allow students to take classes closer to their home on the campus of Tri-County Community College.

Western Carolina University and Tri-County Community College partnership currently offers two cohort degree programs on the campus of Tri-County Community College; the Bachelor of Science in Elementary Education and Bachelor of Science in Birth-Kindergarten.

Students can complete Liberal Studies core requirements and other required prerequisites courses through Tri-County Community College prior to starting the cohort program. Western Carolina University offers the remaining classes for the major through various formats that include face to face, on-line, ITV and hybrid classes.

Students like Rebecca Mathis would not have been able to pursue their educational goals without the opportunity to take classes on the campus of Tri-County Community College through the Elementary Education cohort program. Rebecca explains, “I have always wanted to be a teacher, but after high school I wanted to start my family right away. Little did I know how hard it would be to go back and finish a degree. Since I’m a single mother with a full time job, I would not have time to travel the distance to Western to attend classes. The cohort program has allowed me the opportunity to achieve my dream of being a teacher.” Rebecca is scheduled to graduate in May 2009.

Our partnership with TCCC also allows students an opportunity to talk to an advisor prior to visiting the campus. WCU’s office on the campus of TCCC has been set up to help students understand the admission process, transfer of credits, degree requirements and prerequisites needed for a particular major. WCU’s recently implemented 2 Step program has been a great recruiting tool and a resource guide for students interested in transferring and completing a four year degree. Our partnership with Tri-County Community College results in students that are more successful in achieving their educational goals and the benefits of attending each college is recognized.

Lonnie Dockery, our new regional coordinator at Tri-County Community College, began work this month. To contact Lonnie, see the phone listings on page 8 of this newsletter.

WCU Speaker’s Bureau

By Pat Brown

Educational Outreach is increasingly receiving requests for speakers for community events. The range of interests is broad and provides faculty numerous opportunities to share their expertise with others. If you are interested in being listed in the roster of speakers please contact our office at 828-227-7397.

We will be updating the list over the next few months. If you are currently listed you will be contacted to update your file. Check out the Educational Outreach Web site to see who and what opportunities are in the roster.
The partnership between Western Carolina University (WCU) and Western Piedmont Community College (WPCC) is more than a partnership between two schools; it is a relationship between two communities—WCU and Burke County. Indeed, the business and education (all levels) communities have warmly welcomed and embraced having a Regional Coordinator for WCU in Burke County. Soon after arriving last summer (2007), I was invited to join the Education Committee of the Burke County Chamber of Commerce and the local Business/Industry/Education Council (hosted by the public schools). Both groups meet monthly and offer great opportunities for collaboration.

The nearly three dozen Burke County leaders in business and education who have been participating in the current Educational Needs Assessment express great pleasure at Western’s initiating the process. The community clearly looks forward to the continued and growing association with Western. One of the business folks commented, “I hope you’re here to stay.”

WCU has been reaching out to the Burke County community for many years and has established a wonderful reputation. A Western Piedmont Community College student, a mother of five, sat in my office recently and exclaimed, “I just love Western.” She said it rather matter-of-factly, largely because she greatly appreciates the responsiveness of everyone with whom she has had contact at Western as she looks forward to completing her associate degree and transferring to Western. Other students have made similar remarks for the same reason.

WPCC students have enjoyed having someone from Western on the WPCC campus where they can just drop in if needed, if only to brainstorm options and to get contact information. They appreciate having such ready access to help them look beyond community college. This seems especially true of those who have lost jobs in which they had worked for many years. Returning to school offers new hope for many of those affected in a region that has been hit hard with many plant closings and the loss of several thousand jobs.

As with many areas of the state there is a growing need for more people trained in various areas of technology and healthcare (Burke is promoting itself as an area to which people would like to retire), and there is a great need for teachers in the public schools. Helping to promote and to recruit for these areas is a shared responsibility. The relationship among WPCC, Burke County, and WCU will continue to grow. There is a common vision of sharing and complementing respective strengths to meet the educational needs of our current and future workforce.

Jim Craig is WCU’s regional coordinator at WPCC.
Opening Doors
By Pat Brown

Military students are increasingly finding Western Carolina University a military friendly institution. This past year we saw a 32% increase in the number of military students. These include active duty personnel, many of whom are enrolled in online programs, National Guard members, veterans and military dependents. Some 70% of our military students are on campus as resident students.

Military students come with a history of credit worthy education and training that is not always understood. The American Council of Education manages the process of assessment and credit award for military education. Cynthia Bruce, Director of Military Education recently published the article “Wanted: A Few Good Faculty Members” in the Servicemembers Opportunity Colleges newsletter and has given us permission to publish her invitation in our newsletter. Cynthia has also agreed to come to campus in February to conduct a military education workshop. Details of her visit will follow.

WANTED:
A Few Good Faculty Members
By Cynthia Bruce
Military Education Director, American Council of Education

While many colleges and universities accept the American Council on Education (ACE) Military Programs recommended credit for military courses and occupations, some may not be aware of how those recommendations are formulated. ACE Military Programs evaluators are drawn from postsecondary institutions, professional and disciplinary societies, education associations, and regional accrediting associations. Therefore, if you are actively teaching college-level courses and are receptive to recommending academic credit for learning in an extra-institutional setting, we encourage your participation.

The Evaluation Process
Courses are evaluated by teams of at least three subject matter specialists (college and university professors, deans, and other academicians). Through discussion and the application of evaluation procedures and guidelines, team members reach a consensus on the amount and category of credit to be recommended. Evaluation materials include the course syllabus, training materials, tests, textbooks, technical manuals, and examinations. Additional information may be obtained from discussions with instructors and program administrators, classroom observations, and examination of instructional equipment and laboratory facilities.

 Evaluators have two major tasks for each course: the preparation of the courses description and the formulation of a credit recommendation. The credit recommendation consists of the category of credit, the number of semester hours recommended, and the appropriate subject area. Evaluators phrase the course description (which appears in the Guide exhibits under the headings Learning Outcomes or Objectives and Instruction) in terms meaningful to civilian educators. The course description supplements the credit recommendations by summarizing the nature of a given course.
Selection of Evaluators
Evaluators are drawn from a pool of faculty members. Evaluation teams are selected by the Program Evaluations Content Review Committee. The Content Review Committee meets weekly to determine the appropriate content/academic areas from which the slate of potential evaluators for each review team should be drawn. Members of the Committee reflect a diversity of backgrounds in academe as well as professional experience.

After the evaluation team has been formed, the Associate Director of Military Evaluations confers with them, reviewing the procedures and responsibilities with which they are charged in conducting the review.

Signing up to Serve
ACE Review Teams ensure that what an individual learns is more than when, where, and how the individual learned it. Serving on a team helps ensure a formalized process that colleges and universities can trust and allows team members to network and learn from colleagues across the country while validating and supporting students’ non-traditional learning.

ACE is currently seeking faculty evaluators to aid in recommending academic credit for learning in extra-institutional settings. To be considered as a prospective evaluator, please complete and submit the online Evaluator Application at https://militaryguides.acenet.edu/EvaluatorForm.htm. To qualify, you must be actively teaching college-level courses. If you have specific questions about signing up or the evaluator process, send an email to evaluator@ace.nche.edu; call the Lifelong Learning Resource Center at 202-939-9470 or toll free 866-205-6267; or visit our Evaluator website at http://www.acenet.edu/evaluators.

When a review is scheduled that requires your area of content expertise, you will be contacted directly and advised of the opportunity to serve on the ACE team. ACE pays all evaluators an honorarium and reimburses all travel expenses related to the review.

We need faculty from all disciplines, but are conducting more reviews in the following fields:

• Bioethics
• Ergonomics
• Foreign language
  (Arabic, Farsi, Tajiki, Urdu)
• Gaming
• Homeland Security
• Information Security
• Intelligence
• Logistics and Supply
• Materials Management
• Military Technologies
• Ordnance and Munitions
• Seamanship and Navigation
• Weaponry

WCU Hosts North Carolina Teacher Academy for 14th Year

By Bobby Hensley

This summer marked Western’s 14th year as a host site for the North Carolina Teacher Academy.

The North Carolina Teacher Academy is a professional development program for teachers established and funded by the North Carolina General Assembly. The mission of the Academy is to support continuous learning to the growth of a career teacher by providing quality professional development in the areas of school leadership, instructional methodology, core content, and use of modern technology in order to enrich instruction and enhance student achievement.

From its opening session in July of 1994 through the 2006-2007 fiscal year, the Teacher Academy has trained 39,418 teachers and principals, representing 1,783 schools (78%) from every local education agency in North Carolina. During the 2006-2007 fiscal year, two hundred six (206) Teacher Academy trainers provided instruction.

All North Carolina teachers are eligible to attend the Teacher Academy as part of a team. The Teacher Academy sessions are held as both Residential Academies and Local Partnership Academies. Each Residential session begins on Sunday evening and ends after lunch on Thursday. Participants receive an honorarium of $100.00 per day from the Academy and continuing education units toward licensure renewal upon completion of the follow-up sessions.

Priority in selecting attendees is given to teams that indicate how their attendance at a Teacher Academy session supports their school improvement goals, specifically in regard to the professional development needs identified in that goal. An administrator is required to attend as a member of each team.

This year participants chose from twenty-one topics statewide. All modules are designed to include a combination of current theory complemented by direct hands-on activities.

This summer, Western will hosted approximately 600 teachers from across the state in seven planned weeks.

"Western Carolina University has been a Teacher Academy residential site since our first Academy in 1994. Through the years, Western has provided exceptional service to the thousands of teachers and administrators who have attended Teacher Academy sessions there. Western’s personal touch and commitment to honoring teachers is unsurpassed."

– Julia Kron,
Director, NC Teacher Academy
Bachelor of Science in Emergency Medical Care became an official Army Career Degree program in March of 2007. Ten 18 Delta soldiers entered the program in the spring of 2008, and another thirty-four entered the program in the fall term.

Becoming a fully qualified 18 Delta requires mental discipline, physical endurance, and a devotion to academic studies that is possessed by relatively few people, either military or civilian. Carefully selected soldiers must complete an extremely intense and demanding training program of instruction in medical sciences, emergency medical procedures, and advanced foreign language. This training lasts over one year, includes rotations in various medical specialties, and qualifies the soldier as the equivalent of an EMT paramedic. Prior to the establishment of Western’s EMC program as an Army Career Degree program, there was no accredited college or university that would maximize the value of this training in terms of academic credit or allow the soldier to apply it towards the completion of a bachelors degree in emergency medicine. Western’s agreement with the Army now allows the typical 18 Delta to begin the EMC program with a guaranteed 52 to 56 transfer semester credit hours, a figure that includes 15 hours in liberal studies. 18 Delta soldiers who have never stepped foot into a traditional college classroom can enter the EMC program with nearly two full years of college credit. In addition, graduates of the EMC program are fully prepared to enter medical school or a physician assistant program—two very common professional goals of these soldiers.

It should be noted that these transfer credit hours are not merely token credits granted as a show of support for military students. On the contrary, they are based on the stringent academic standards and recommendations of the American Council on Education (ACE).

Western’s partnership with the Army is a classic win-win agreement. Western’s EMC degree offers the strength and features that military students must have: high quality instruction that is accessible from anywhere in the world, extremely affordable tuition, ease in using education benefits, and ultimately, a degree from a nationally renowned and regionally-accredited university. There is no requirement for these military students to ever be physically present on campus or be logged in to online courses at a specific time. The EMC program is not cohort based, and the flexibility offered by EMC professors is unsurpassed. Several 18 Delta students currently enrolled in the EMC program are deployed to Iraq and other locations.

Western Carolina University also benefits in a major way from this partnership. The mandates of UNC Tomorrow require UNC system universities to significantly increase their outreach and services to military members, as well as military spouses and children, stationed in NC. This already fruitful partnership helps Western to become a system leader in meeting these mandates, and by subsequently multiplying enrollments by military students.

For more information on military education at Western Carolina University, contact Charles Gross, Director of Military Education (828-227-2135; cgross@wcu.edu).
