BCSSE 2011-NSSE 2012 Respondent Characteristics
August 2012

The *BCSSE 2011-NSSE 2012 Combined Report* contains two sections, cross-sectional results and longitudinal results. The *cross-sectional* results include frequencies from *all* your BCSSE and NSSE respondents. For comparison purposes, only similar items on both instruments are included in this section (there were 23 items in the BCSSE survey identical or similar to items in the NSSE survey). Using all your BCSSE and NSSE data provides your institution with the best estimates of your incoming first-year student characteristics and their end-of-year engagement.

The *longitudinal* results portray the matched data from those first-year students who completed both BCSSE in the summer/fall of 2011 and NSSE in the spring of 2012. Though not all students complete both surveys, examining available matched results allows you to focus on environmental factors that may influence the nature and frequency of student engagement in various areas in the first year. Because the number of respondents varies for the cross-sectional and longitudinal results, background characteristics for both are summarized below.

BCSSE 2011 - NSSE 2012 Samples
