

What can I do with a degree in... **CHEMISTRY?**

What is **CHEMISTRY?**

Chemistry is often called the 'central science' that connects physics, biology, engineering, and medicine. A chemistry degree will help you gain a better understanding of our world at the molecular level and how we can develop new materials that improve and advance our society.

A chemistry degree from WCU prepares students for immediate employment or further graduate study. Approximately half of our graduates seek employment in environmental chemistry, biotechnology, or with government agencies. Most of the other half enroll in graduate studies in chemistry, medical school, or pharmacy school.

Whether working in the lab, classroom or corner office, graduates are able to demonstrate to employers and mentors their knowledge, research abilities and familiarity with instrumentation. Within the chemistry program you can choose a standard, comprehensive degree or one with a concentration that matches your goals and interests.

What are the **DEGREE OPTIONS?**

Bachelor of Science (B.S.) in Chemistry

What are the **CONCENTRATIONS?**

There are three undergraduate degree options available to students within the chemistry major: **American Chemical Society Concentration, General, or Biomedical Science and Technology.** Your chemistry advisor can help you in deciding which concentration most closely matches your career goals.

NOTE: Students who want to teach Chemistry or Physics at the high school level may pursue a Bachelor of Science in Education (B.S. Ed.) in Secondary Sciences and choose either the Chemistry or Physics options. The Chemistry and Physics program is also offered as a minor.

What is the **ADMISSION PROCESS?**

Students declare a Chemistry major with the Advising Center, located in Killian Annex. Please make an appointment with your advisor via your MyWCU student portal.

What **JOBS ARE AVAILABLE?**

Depending on the concentration and other qualifications, our graduates are prepared to become a variety of professionals including agricultural technicians, agronomists, anesthesiologists, biochemists, biophysicists, chemical engineers, chemical technicians, educators, environmental

chemists, geologists, food science technicians, product developers, geneticists, medical professionals, pharmacists, toxicologists, researchers, and more. **NOTE:** Many of these professions require advanced master's or doctoral degrees.

Who employs **CHEMISTRY** graduates?

Our graduates often work with hospitals and other health organizations, non-profit organizations, government agencies, public and private sector businesses, research companies, forensic and criminal justice agencies, and food industry companies.

MAJOR MAP

How to use this map: Review the four categories and suggestions of activities and when you should consider engaging in them. Remember, these are just suggestions! There is a fillable space for you to add in any other ideas you have to set yourself up for success in life after college.

1st YEAR

2nd YEAR

EXCEL IN ACADEMICS

Many students seeking to major in Chemistry major will focus on the liberal studies requirements as well as introductory Chemistry courses. [Check out the 8-semester plan for your concentration](#) and make an appointment with your advisor.

Students in their second year will likely continue with liberal studies electives as well as continuing with Chemistry courses. [Check out the 8-semester plan for your concentration](#) and make an appointment with your advisor.

GET HANDS-ON EXPERIENCE

Check out [WCU's DegreePlus program](#) and choose which events in any of the four categories you want to attend. Categories include: Professionalism, Teamwork, Leadership, or Cultural Responsiveness.

Get involved with the Chemistry Club

See what on-campus employment opportunities are available by logging in to JobCat via your MyWCU.

If you are thinking about attending a graduate or medical school, start engaging in hands-on experiences required in graduate school admissions.

Engage deeper with [DegreePlus](#); choose an additional competency to complete

BE PART OF THE COMMUNITY

Connect with the [Center for Service Learning](#) and ask about the [Lily Award](#), a program aimed to encourage students to be connected with their community.

Job shadow with professionals in the career area you wish to pursue.

Volunteer with area non-profits or organizations which interest you.

Consider the [study abroad programs related to chemistry](#). Talk with a study abroad advisor about targeted experience for your concentration.

PREPARE FOR LIFE AFTER COLLEGE

Further explore your career options or career interests using the [Center for Career and Professional Development's](#) online resources, [Focus 2](#), and [Onet Online](#).

Check out [CCPD's list of career-building activities](#) and participate in an activity this year, such as attending Career Fair Plus.

Connect with a career counselor early on to explore opportunities and experiences you can do while in college to further develop your professional resume.

Start a spreadsheet of medical/ graduate schools you wish to apply to in a few years with their admission requirements so that you are aware of the expectations.

Looking for a minor? Consider these options:

Anthropology
Biology
Chemistry

Communication
Criminal Justice
Physics

Psychology
Sociology

3rd YEAR

Third level courses focus on upper-level Chemistry and special topics relating to the concentration and/or minor. [Check out the 8-semester plan for your concentration](#) and make an appointment with your advisor.

Consider internship experiences that will give you practical and hands-on experience to put on a resume.

Consider networking with professionals in your field at national or regional professional conferences such as the American Chemical Society or the American Association of Clinical Chemistry annual conferences.

Develop deeper relationships with the organizations for which you volunteer. Ask for special projects or responsibilities that you can highlight on a resume.

Connect with alumni in your field through [LinkedIn](#)

Visit the CCPD to hone your professional resume and cover letter. Apply for internships. Utilize the [Writing and Learning Commons](#) for MCAT, GRE, and other professional exam preparation sessions. Use [Big Interview](#) to learn more about professional interviews.

Schedule a visit to tour medical/ graduate schools of your choice, if applicable.

4th YEAR

Courses in your final year will complete the forensic science and concentration courses, as well as your chosen general electives. Be sure to [check out the 8-semester plan for your concentration](#), make an appointment with your advisor, complete your degree audit, and [apply for graduation!](#)

Investigate requirements for full-time jobs. Assess what skills or experiences you're lacking and invest time in seeking additional opportunities such as certification programs, classes, or professional development workshops during your last year to fill that gap. Connect with your faculty advisor or career counselor.

Join professional organizations such as the [American Chemical Society](#) or [American Chemical Council](#).

Network with employers and non-profits at the annual Career Fair Plus event, held each October and February.

Apply to medical/ graduate schools, if applicable.

Look for and [apply for jobs](#) between 4 and 6 months before graduation.

Polish your resume, cover letter, and interview skills by using the [CCPD](#).

Internships are still the number-one educational experience employers look for in a recent college graduate resume. (Chronicle of Higher Education's study on 59,000 employers)

DID YOU KNOW?

MORE INFORMATION

INTERNSHIP Information

At Western Carolina University there are numerous internship opportunities for students. In some cases internships are established through a faculty member in the student's major. Oftentimes students find part-time jobs in an area related to their field of study. When this happens, students should discuss with their academic advisor the possibility of receiving college credit. Generally, three hours of general elective credit can be earned for a minimum of 200 hours of experience.

SKILLS LEARNED in the classroom

The core competencies will center on developing skills, knowledge, and attitudes such as:

- independent thinking
- critical thinking
- problem solving
- written and oral communication
- professional teamwork
- analytical reasoning
- curiosity and creativity
- statistical analysis
- research skills
- analytical and quantitative abilities
- technical skills

KNOWLEDGE Base

This program will prepare students to:

- learn, understand and interpret information and apply knowledge to new situations

- set priorities, meet deadlines and effectively plan/manage time, data and resources
- Problem-solve and make well-reasoned decisions, think creatively and search for, identify and consider all sides of an issue
- analyze and interpret a wide range of information and data to discuss, support and/or reject ideas, opinions, reports, theories and proposals
